

Dust Space

Crafting Clarity from Complexity

Dust SEED Round

Effectively manage any asset
the way you want

Kirill Evans

Dust CEO

Introduction

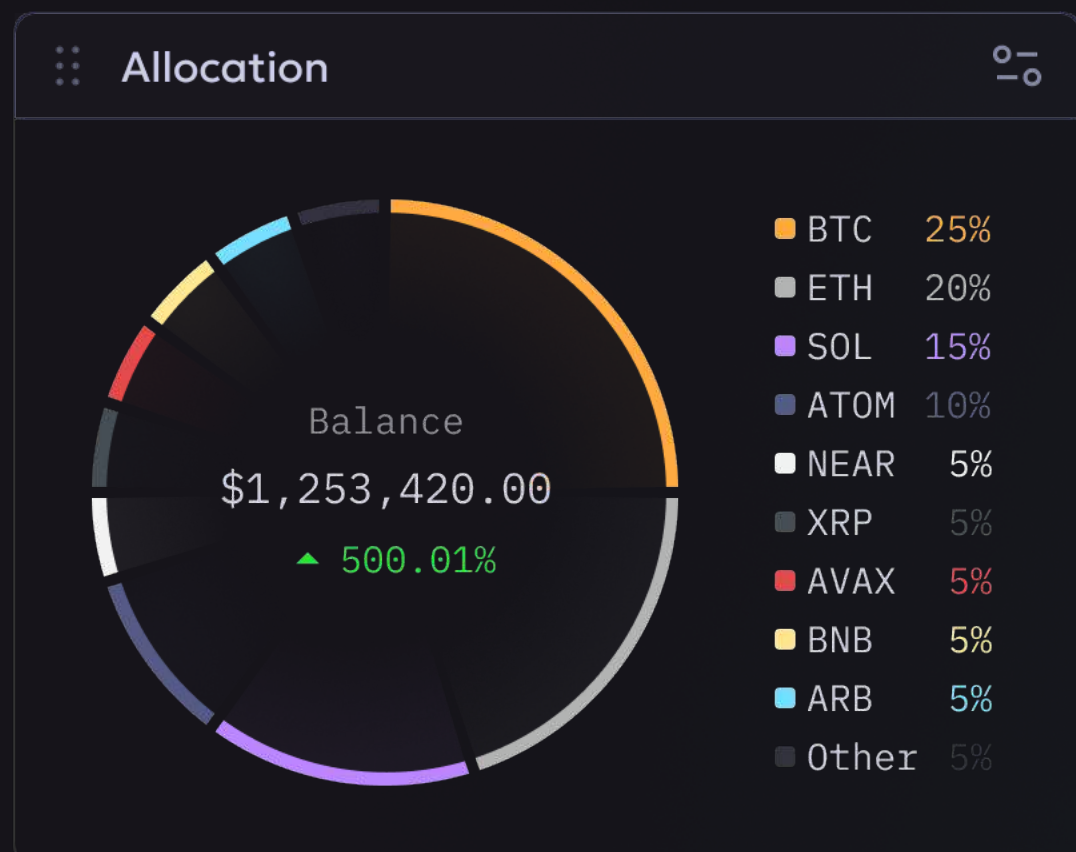

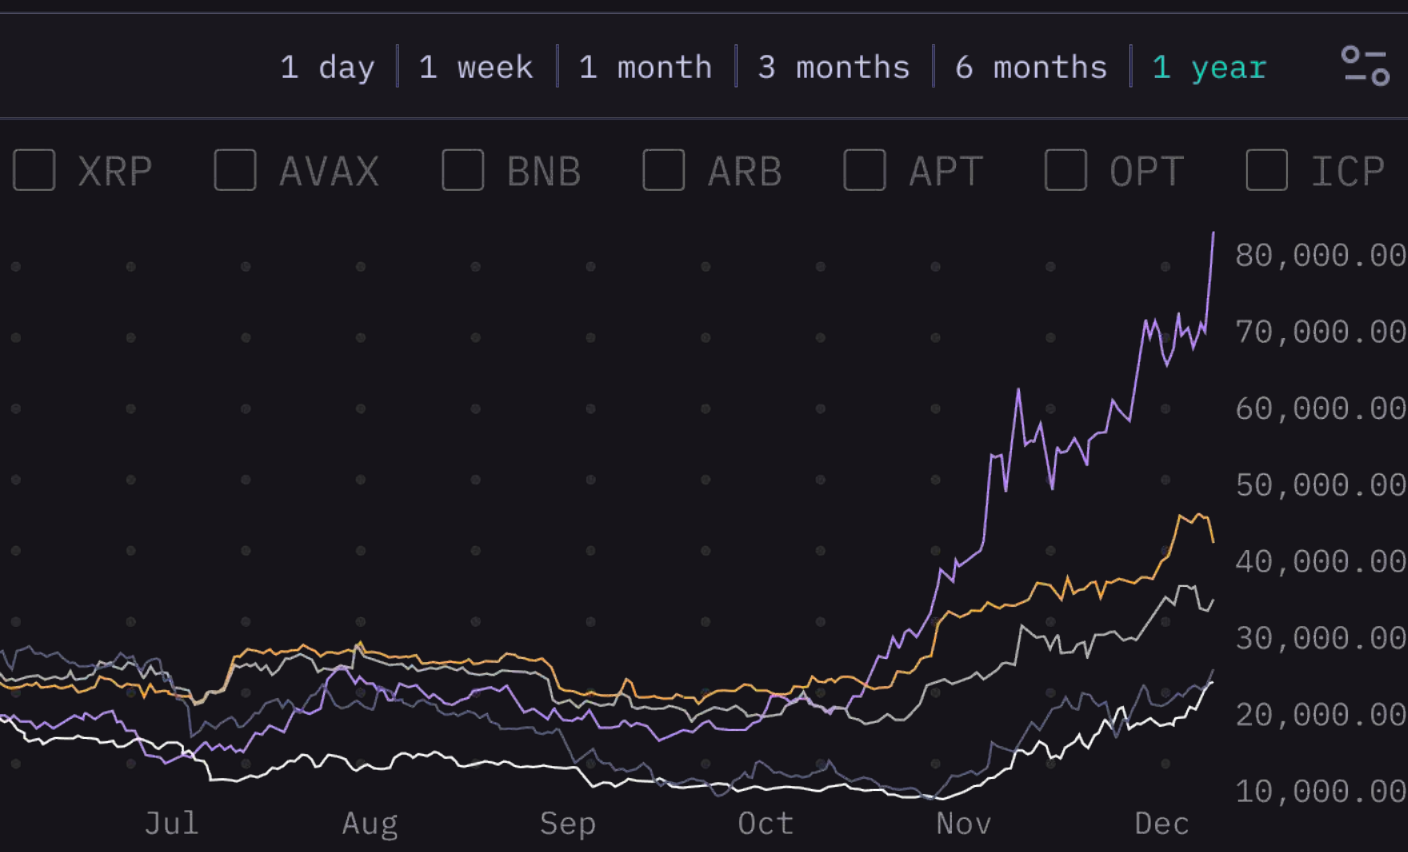

Dust Space is an innovative platform for managing cryptocurrency assets. We provide convenient tools for creating virtual, exchange, and venture portfolios. Track, analyze, and optimize your assets in real-time, making cryptocurrency portfolio management simple and efficient.

You have 88.07% increase in your assets for last week. [Check the rebalancing recommendations.](#)

Problems in the user journey

Bought a lot of different assets

Bought a few coins on the exchange and wondering how to track their performance effectively and conveniently?

Trying to track effectively

Subscribed to a portfolio service, but it's all so complex and unclear...

I've been disappointed

Tried many different services, but either they lack the features I need, suffer from constant bugs, or are simply inconvenient.

Starting to use primitive solutions

Disappointed with current products, I open an Excel spreadsheet and manually enter my assets there.

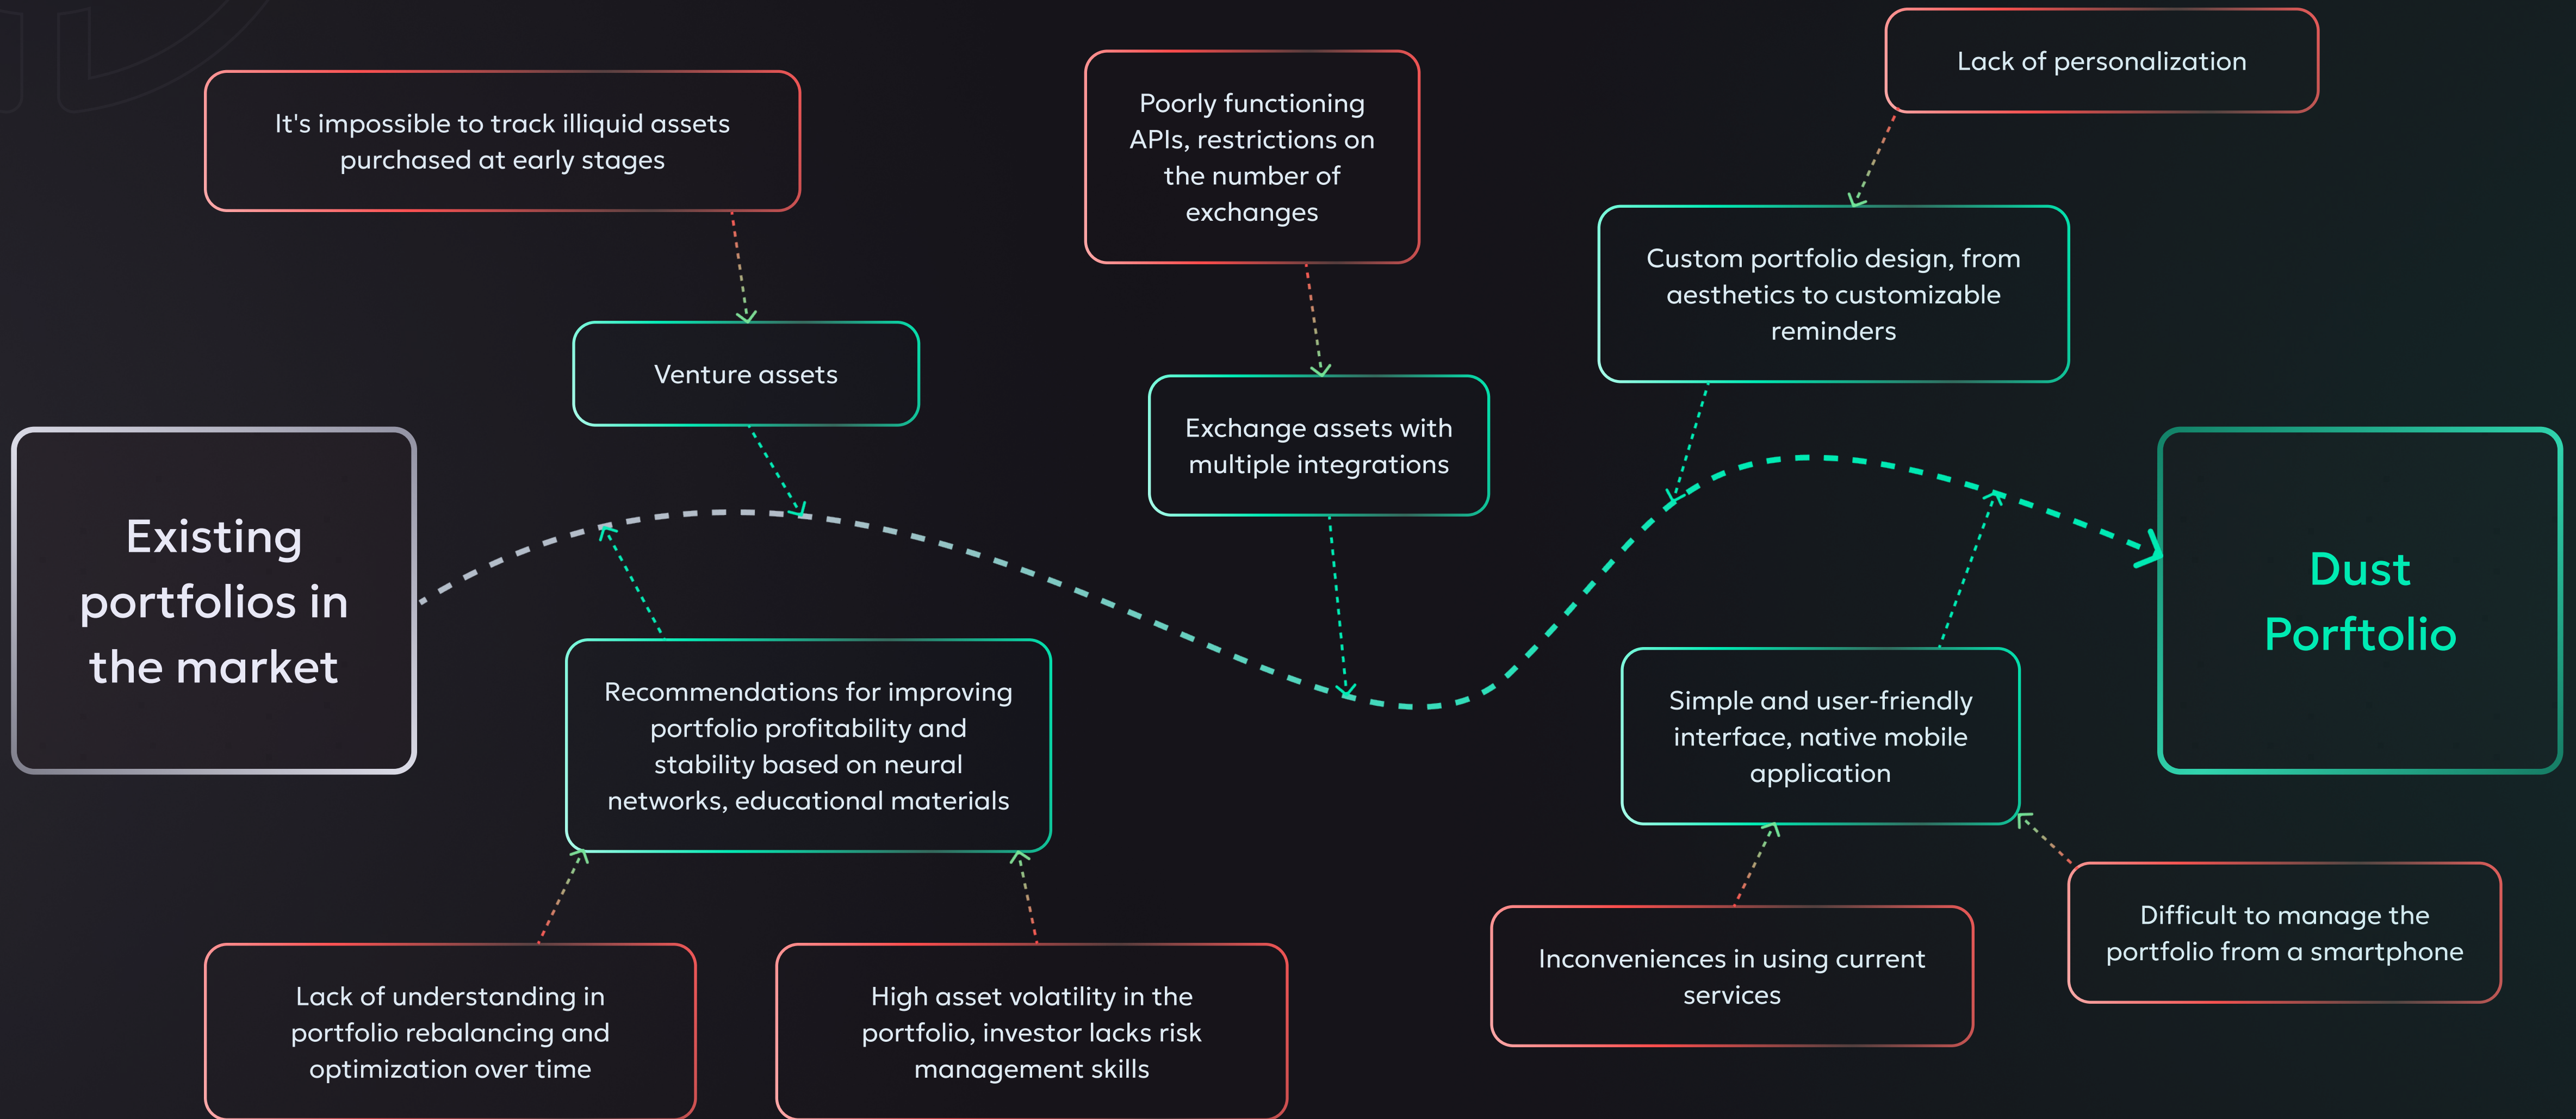

Hope for a bright future

Hoping that one day there will be a simple yet convenient service for managing my portfolio.

Our solutions

Founder story

Kirill Evans

 Youtube 440k subs

“After numerous attempts to use existing crypto services and facing inconveniences, I realized that the market needed something new. Deciding to create my own project, I aimed to solve not only my problems but also provide investors and traders with a convenient and efficient tool. This is my story of overcoming the pains that led to the creation of our innovative portfolio.”

Current portfolios are not effective

Existing portfolio services are limited in exchange integration, complex to use, and do not provide flexible options for personalization, as well as managing virtual and venture assets.

The community is waiting for change

My crypto community is tired of inefficient portfolio solutions. Traders and investors are seeking an innovative product with a user-friendly interface, advanced functionalities, and customization that will change our perception of managing crypto assets.

Integrations with exchanges

WhiteBIT

BYBIT

Main portfolio features

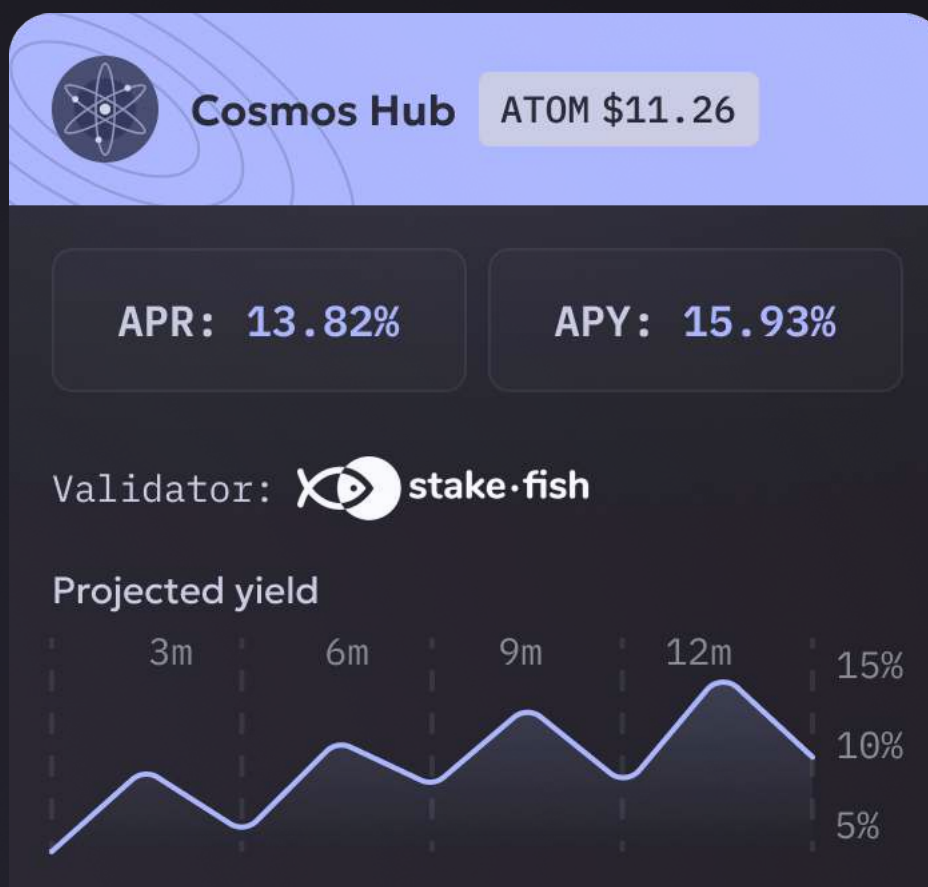

Venture assets

You can add assets not yet listed on exchanges, track unlocking periods of your investments, and stay at the forefront of cryptocurrency innovations.

Real & Virtual assets

Integrations with exchanges allow you to track your real assets clearly, while a virtual portfolio gives you the ability to experiment with different assets and testing strategies without financial risk.

Integrated staking

Proprietary staking functionality with support for multiple assets, chains and validators allows you to not only monitor your investments, but also have additional earnings from them.

Total customization

You can customize each individual element in the interface as it suits you, or you can choose ready-made presets.

Why now?

Today, we stand on the verge of a revolution — transitioning from Web 2 to Web 3. While most of the market is dominated by Web 2 companies, the trend is steadily moving towards simplifying Defi (account abstraction, cross chain, made automated), increasing services on data availability, and protecting user data. Data is transitioning into user ownership, becoming their assets. Web 2 companies actively invest in Web 3, and large holdings incorporate blockchain solutions within the company (corporate blockchains).

Users want something new

Barriers to portfolio service change

How do we break down these barriers

Laziness

"Already added all my assets, **too lazy** to do it again in another service"

Time saving

Instant **integration** with top exchanges through API, allowing you to import your assets **effortlessly**

Fear

"**Used to** the current interface, **don't want** to delve into a new one"

Convenience

Our **intuitive interface** is designed with user habits in mind, and onboarding will help you **adapt quickly**

Uncertainty

"**Don't understand** why, don't see the point or benefit"

Benefit

We not only provide tools for tracking assets but also **assist** in making more informed **financial decisions**

Misconceptions

"**Excel is better**, simpler, it has everything I need"

Opportunities

We offer **ease of use** and, at the same time, **advanced features** that are not available in traditional spreadsheets

Revenue model

Ultimately, our profit depends on how many products in the ecosystem a user will use. At the same time, our client will benefit from using several services at once such as Portfolio, Tradefolio, Indexes, Stake HUB and Alerts due to their synergy and convenient integration in the ecosystem. Here is a visual demonstration of how the profit will vary depending on the number of services activated by the user
